Yuanhao Zheng

Email: zhengyuanhao@zju.edu.cn | **Tel:** +86-188-8892-0546 | Website

Research Interests: Postharvest technology, Fruits quality detection

EDUCATION

Zhejiang University (ZJU) ***Hangzhou, China***

M.Eng. in Agricultural Engineering | Grade: 88.6/100 *09/2022 – 06/2025 (Expected)*

Agricultural Systems Modeling and Big Data Analytics (93), Bio-systems Detection and Control Technologies (93), Engineering Analysis of Biological System (98), Special Topic of Precision Farming Technology (88)

Zhejiang University (ZJU) ***Hangzhou, China***

B.Eng. in Food Science & Engineering | GPA: 3.61/4.0 *09/2017 – 06/2021*

Analytical Chemistry (89), Postharvest Technology of Fresh Fruit and Vegetables (89), Food Sensory Evaluation (94), Food Microbiology (86), Fermentation Technology (95), Food Additives (92), Dairy Technology (93)

RESEARCH EXPERIENCE

[1] Nondestructive detection of cherry tomatoes' quality *06/2022 - 08/2024*

- Improved nondestructive prediction performance for lycopene and soluble solids content (SSC) in cherry tomatoes based on UV/Vis/NIR spectroscopy and machine vision.
- Developed the feature synergy and spectral bands combination strategy for SSC prediction.
- Implemented spectral characteristic bands enhancement and spectrum-image fusion methods to enhance lycopene content detection accuracy, achieving prediction R^2 of 0.95.
- Detected fruit quality from the perspective of supplement and interpretation for raw information.

[2] Pest-infested crabapples discrimination using Vis/NIR spectroscopy *10/2023 - 08/2024*

- Discriminated pest-infested crabapple by compensating for the influence of external orientation and enhancing the difference in spectral morphological features (SMFs).
- Utilized a global model incorporating multiple crabapple orientations to mitigate external position impacts, resulting in improved classification accuracy compared to the single-position local model.

- Investigated and applied SMFs to amplify the differences between healthy and pest-infested crabapples' spectra, achieving an average discrimination accuracy of 95.94%.
- Classified crabapples in terms of influence elimination and difference amplification.

[3] The electrospun zein nanofibers crosslinked by alginate dialdehyde for controllable curcumin release (Undergraduate Thesis, Advisor: Prof. Hui Zhang) *10/2020 – 06/2021*

- Prepared zein/alginate dialdehyde (AD) electrospun nanofibers through green crosslinking.
- Enhanced the nanofiber's physical/mechanical properties, hydrophobicity, and swelling ratio, while reduced weight loss in water through high cross-linking degree.
- Loaded curcumin (CUR) with nanofiber, achieved effective encapsulation and controlled release, and noted a gradual antioxidant behavior rise corresponding to the release behavior.
- Constructed electrospun membrane for the protection and controlled release of phytochemicals.

[4] Extraction and purification of strawberry anthocyanin and preparation of its embedded microemulsion (Undergraduate Student Research Training) *05/2019 – 09/2020*

- Optimized the ultrasound-assisted extraction of strawberry anthocyanins using response surface methodology, and separated and purified anthocyanins with Macroporous resin and Sephadex gel.
- Developed W/O emulsions with Tween 80 and Span 20 to encapsulate anthocyanins.

ACADEMIC ACTIVITIES

Services

- Part-time counselor for undergraduate students in 1st year *08/2023 – 07/2024*
- Peer review service for ***Food Control*** *05/2024 - present*

Awards

- National Encouragement Scholarship *2020*
- Scholarship for Excellence in Special Major *2019*
- The Third Prize Scholarship of ZJU *2019*

Conference Presentations

- World Photonics Conference (**AOPC2024**) *07/2024*
  Lycopene detection in cherry tomatoes, Oral presentation ***Beijing, China***
- International Commission of Agricultural and Biosystems Engineering (**CIGR 2024**) *05/2024*
  SSC prediction in cherry tomatoes, Oral presentation ***Jeju, South Korea***
- Chinese Society of Agricultural Engineering (**CSAE 2023**) *08/2023*
  Vis/NIR-based cherry tomato quality detection, Poster presentation ***Chengdu, China***

SKILLS

Language: Mandarin (native), English (fluent)

Program Skills: C/C++, MATLAB, Python

Experimental Skills: Machine learning, Near-infrared Spectroscopy, Spectral data analysis, Extraction of natural products, Fruits quality evaluation, Chemical analysis, Image processing.
